## WIRELESS MEASUREMENT SYSTEM

- ▼ 3rd Generation, Tiny, Wireless Smart Sensors
- ▼ TinyOS - Unprecedented Communications and Processing
- ▼ > 1Yr Battery Life on AA Batteries (Using Sleep Modes)
- ▼ Wireless Communications with Every Node as Router Capability
- ▼ 315, 433 or 868/916 MHz Multi-Channel Radio Transceiver
- ▼ Light, Temperature, RH, Barometric Pressure, Acceleration/Seismic, Acoustic, Magnetic, and other Sensors available

## Applications

- ▼ Wireless Sensor Networks
- ▼ Security, Surveillance, and Force Protection
- ▼ Environmental Monitoring
- ▼ Large Scale Wireless Networks (1000+ points)
- ▼ Distributed Computing Platform

## MICA2

The MICA2 Mote is a third generation mote module used for enabling low-power, wireless, sensor networks. The MICA2 Mote features several new improvements over the original MICA Mote. The following features make the MICA2 better suited to commercial deployment:

- 868/916MHz, 433 or 315MHz multi-channel transceiver with extended range
- TinyOS (TOS) Distributed Software Operating System v1.0 with improved networking stack and improved debugging features
- Support for wireless remote reprogramming
- Wide range of sensor boards and data acquisition add-on boards
- Compatible with MICA2DOT (MPR500) quarter-sized Mote

TinyOS 1.0 is a small, open-source, energy efficient, software operating system developed by UC Berkeley which supports large scale, self-configuring sensor networks. The source code and software development tools are publicly available at:

### Processor and Radio Platform (MPR400CB):

The MPR400CB is based on the Atmel ATmega 128L. The ATmega 128L is a low-power microcontroller which runs TOS from its internal flash memory. Using TOS, a single processor board (MPR400CB) can be configured to run your sensor application/processing and the network/radio communications stack simultaneously. The MICA2 51-pin expansion connector supports Analog Inputs, Digital I/O, I2C, SPI, and UART interfaces. These interfaces make it easy to connect to a wide variety of external peripherals.

### Sensor Boards:

Various sensor and data acquisition boards are available from Crossbow. These boards connect to the MICA2 through a surface mount 51-pin connector. Crossbow supplies the following sensor boards:

- MTS101CA Photocell/ Thermistor/Proto and Experiment Board
- MTS300CA/MTS310CA Photocell, Thermistor, Microphone, Sounder, Magnetic (310 only), Acceleration (310 only)
- Contact Crossbow for information on other boards

### Base Stations:

A base station allows the aggregation of sensor network data onto a PC or other computer platform. Any MICA2 node (MPR400CB) can function as a base station by plugging the MPR400CB processor/radio board into a standard PC interface board, known as the Mote Interface Board (MIB510CA). The MIB510CA provides a serial interface for RS-232 as well as a parallel port programming interface for the Motes.

Crossbow also offers a stand-alone gateway solution, the MICA-WEB for both TCP/IP-based Ethernet networks and serial networks.
